

Capture Every Moment

Sean McInerney has been racing for over 7 years and has achieved consistent success during this time. Starting out in the Ford Fiesta Challenge he was runner-up in 2002. Switching to Britcar in 2003 he won his class in a Honda Integra before opting to compete in a Porsche 996 GT3 in 2006, again achieving a number of race wins.

2008 has seen him competing in both Britcar and the Classic Endurance Series in a Mosler MT90 0R and a BMW M1 respectively, achieving a combined 9 poles, 6 wins and 6 fastest laps. Sean has been using Drivedata products for 3 years to evaluate both his and the cars' performance.

Key Challenges

- Removing the issue of vibration and utilising more than one camera
- In the Britcar series there was a requirement for longer recording times
- A requirement to use video equipment in very high operating temperatures

Outcomes

Utilising Drivedata's cutting edge digital video recording technology has

- **Allowed multiple driver line-ups to compare and contrast technique and approach**
- **Significantly improved lap times and knowledge of circuit layouts**
- **The video recording equipment has continued to work faultlessly, even at high operating temperatures, including fire!**

“

Both the live video transmission and camera recording systems have been able to cope in what is a very tough environment. John's knowledge and experience are just two of the reasons I have continued to do business with him. I have recommended his products to others who have subsequently bought from him and they have all had the same positive experience. In addition John has consistently made himself available to provide any technical support required.
