

Drivedata Video Recorder

Drivedata is an independent designer and manufacturer of professional video and data recording systems, which supplies a number of leading F1, WTCC and GT teams. Just recently it launched a new Digital Video Recorder - the Drivedata DR2.

The system uses solid state recorder technology and has MPG / AVI recording capability at the maximum resolution of 720 x 576, at 25fps. The DR2 also includes the option to record in two formats - MPEG2 for DVD and MPEG4 for web applications and video streaming.

John Chambers, Managing Director of Drivedata commented: "We have focused on developing a product that our customers know will perform consistently in harsh and extreme environments, and yet is competitively priced."

The DR2 Digital Video Recorder can record directly onto a compact flashcard, and at the highest quality setting can record over two hours of footage on an 8GB flashcard. It can be used in a variety of automotive, autosport, motorcycle, aqua and other extreme sports applications and can also be bundled with an extensive range of cameras, camera mounts, remote controls and other accessories.4

The product is available via selected stockists or via the www.drivedata.com website, or by calling 08707 60 70 44.

ST Exhaust for Focus

Piper understands that while the ST Focus is (besides the RS) the best looking model in the range, not everyone can stretch their budget to that model. So, knowing that ST-style bumpers are readily available, they've designed a replica ST exhaust to suit.

The Piper Focus ST Replica exhaust looks just like the version that Piper make for the Focus ST but it will fit any of the Focus Mk2 models including the 1.6, 1.8, 2.0 Diesel and 1.8 and 2.0 petrol models.

The system is made from aircraft quality stainless steel and has a 2.25-inch bore throughout. The duplex (dual exit) system can be ordered with various tailpipes, including 88mm round with inward roll, 88mm round with outward roll, or 100mm round with slash cut.

The 2.25in bore ST Replica system retails at £423, and a 2.0-inch bore version is also available for Focus Mk2 1.4 and 1.6 petrol models at £423.

Air/Fuel Tuning

Setting up a modern engine's fuel map can involve a lot of expensive trial and error sessions on the rolling road. Now there is an alternative - Burtons have been appointed Innovate dealers and can offer the complete Innovate range of Air/Fuel Ratio Meters, wideband controllers and accessories.

An Innovate LM-1 Air/Fuel Ratio Meter will allow a DIY tuner to adjust many variables and monitor the fuel map to see how rich or lean an engine is running at any load and while compensating for ambient temperature, altitude and sensor condition.

Up to 44 minutes of data can be logged and downloaded to a PC and viewed/analysed by the included LogWorks software or any standard spreadsheet program. Burton can also supply Innovate Air/Fuel ratio gauges for real time monitoring. The basic LM-1 kit includes the LM-1 meter, a Bosch wideband O2 sensor, sensor cable, cigarette lighter power adaptor, serial cable for PC, 9v battery, exhaust bung and plug, CD and quick start guide.

The LM-1 kit retails at £229.95 including VAT. Innovate Wideband Air/Fuel Ratio gauges are available for use with the LM-1 from £77.50.

Complete Wideband Air/Fuel Ratio gauge kits complete with controller, sensor, bung and plug and software are also available from £179.99.
